# Smart Energy

Intelligent use of energy simplifying daily life with optimization of end-users power consumption.

[See what our Smart Energy series offer](#) →

Smart energy solutions allow end-users to closely monitor and control the energy consumption of their buildings & homes. In its essence, energy management is about close and accurate energy consumption monitoring and reporting of data.

### **Environmentally friendly & cost efficient**

In addition to reducing the environmental footprint of households and corporate buildings, smart energy systems reduce operating costs substantially.

Energy management systems utilize the leveling of peak loads to manage energy consumption most efficiently.

The long-term goal of energy management systems is to employ knowledge of consumption patterns to reduce energy costs, by moving consumption to low demand periods.

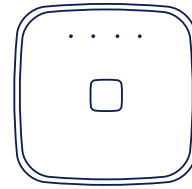

### **Worry-free**

Consumers should have less worries of not having control of power expenses. Consumers can connect all smart devices to their smart house care system and create rules keeping the costs as low as possible by device interaction.

Also, the app will alert if there is a power failure or the home temperature reaches critical levels regarding frost.

# List of products within Smart Energy

## Homegate AiO S402

Connect your smart devices

## Relax Smart Plug

Monitors and controls of electrical appliances with security on-board

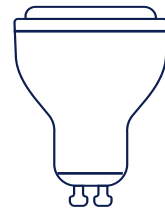

## Smart Cable

Monitors energy consumption and control electrical devices

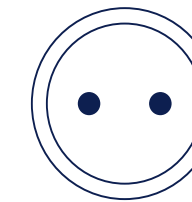

## Ikea Lightbulb E27

Controls light remotely with the help of app

## Ikea Lightbulb GU10

Controls light remotely with the help of app

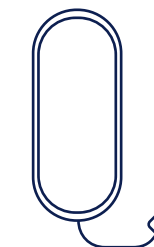

## Smart Plug Mini

Monitors and controls of electrical appliances

## Smart Relay 16A DIN

Remote power control designed for DIN mounting

## EMI Norwegian HAN

Real-time measurement and reporting of power consumption
